

**For eco-tech enthusiasts, ensuring precise control over every charge.**

The original zappi range has led the UK domestic market for over 7 years, pioneering as the first of its kind globally and setting the benchmark for all solar-compatible chargers. Trusted by installers, and developed through installer feedback, this kick-started the innovative PEN fault technology that has set the standard for all chargers in the UK.

Tailor-made with the tech tinkerers, the early adopters, and the innovators at heart, zappi is the go-to for those who love diving deep into settings and tweaking their energy use down to the finest detail.

It's a dream for tech enthusiasts, complete with a backlit screen that makes on-device configuration a breeze. Ideal for users and developers eager to tailor and optimise their home ecosystems.

The zappi multiphase includes a Commercial mode, linking chargers to various EV management solutions for pay-per-charge, expense tracking, fleet management, and more. The model has evolved into a multiphase charger, accommodating both standard domestic 7kW 1-phase supplies and 22kW 3-phase suppliers.

### Customise your charging for tailored eco efficiency.

- + Compatible for both 7kW & 22kW applications
- + Backlit screen for detailed device settings and functionality
- + Commercial mode & OCPP-ready for seamless fleet management and payment integration
- + On-screen custom messages and QR codes for commercial user interactions
- + Classic design with soft-touch buttons
- + On screen PIN code lock
- + Seamless solar and home ecosystem integration
- + Easy low-cost energy tariff integration
- + myaccount Desktop management platform
- + Choose between Black or White to match any aesthetic
- + Available with tethered cable or as an universal socket
- + WiFi & Ethernet connectivity
